Initial Document

Online shopping system:

Online shopping system is a system that the manager can add products (every type of online shop you want) and customer can buy the products online, receive the delivery to his home and write a review about the purchase and about his shopping experience.

You need to build this type of system.

Minimal System requirements:

Online shopping system manager:
1. The manager will be able to add/delete/update a product to the catalog.
2. The manager can change the price of a product.
3. The manager will be able to change the status of an order made by a customer(approve/cancel).
4. The manager will be able to log in to the site,register to the site and edit his/hers details.
5. The manager will be able to see all orders.
6. The manager will be able to add a quantity for products available for purchase.
7. The manager will be able to add days of delivery and mark dates and hours as "unavailable" so clients will not choose his/hers delivery on those times.
8. The manager will be able to get statistical information about his/hers store purchases(for example: how many customers were bought at a specific month or year, what is the best-selling product in the store, etc.)

Customer:
1. The customer will be able to log in to the site and register .
2. The customer will be able to edit his/hers profile.
3. The customer will be able to view his orders and cancel order after limited time.
4. The customer will be able to choose products from a variety of categories.
5. The customer will be able to search product.
6. The customer will be able to sort the products by increasing price.
7. The customer will be able to add a product to his/hers shopping cart (only if it's in stock).
8. The customer will be able to buy the shopping cart and choose a day from list of days, to get his delivery.

Those are minimal requirements, we expect you to add more.

Good luck!
